INSIDE FACTS · · WHAT YOU ABOUT WHAT YOU CAN'T SEE IN

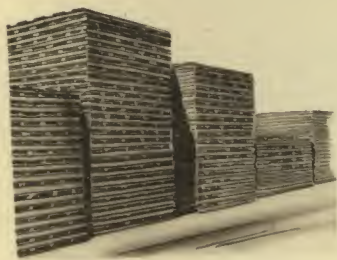

No sound business man likes to buy a pig in a poke, but that's exactly what he must do when he buys a piece of upholstered furniture. The leather which covers the chair or sofa you buy is the sealed bag. What's inside? You don't know and we, who have been in the business for many years, can't tell by LOOKING at the finished piece if the inner construction is substantial. Only after we have opened up a sofa or chair or have seen it made can we tell if the upholstered piece is good or not.

What are you to do, then? Does this mean that

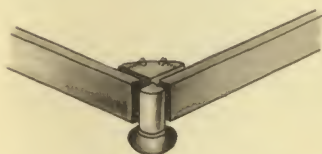

buying upholstered furniture is a gamble? The gamble in buying upholstered furniture is in buying on price alone or from a manufacturer whose name is unknown.

Upholstered furniture can be built to last twenty years or to last less than a year. It all depends on the workmanship and materials employed. Believing that you prefer buying good upholstered office furniture, we give you on the following page, the inside facts regarding good upholstering. When you buy Sikes upholstered office furniture you know that you are getting the best possible, furniture that will give long, lasting satisfaction. The inside facts shown on page 3 may be considered as a guide by which other upholstered furniture may be judged.

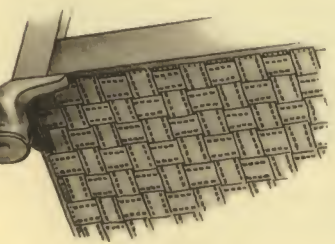

FRAMES. As you know, an upholstered piece starts with a wooden frame. While soft woods are available, Sikes frames are made of hard wood, either birch or maple. The lumber we buy is "firsts."

This means that the grain is straight and that there are no structural defects. Our lumber is kiln dried in our own kilns. That assures you it will not warp or crack.

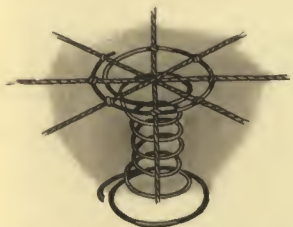

JOINERY. The squeak in most upholstered furniture comes from loose joints. This won't happen with Sikes furniture because all joints are double dowelled. In addition, the joint is reinforced by hand fitted, glued and screwed corner blocks. Sikes joinery is far different from the joinery of those manufacturers who merely nail or screw their frames together.

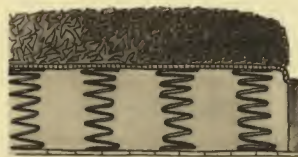

WEBBING. The base on which the upholstering rests is made of interlaced jute webbing. Sikes uses the heaviest jute

webbing available and basket weaves the webbing as closely as is possible. Beware of furniture that uses metal bars instead of webbing. When springs touch metal there is bound to be noise.

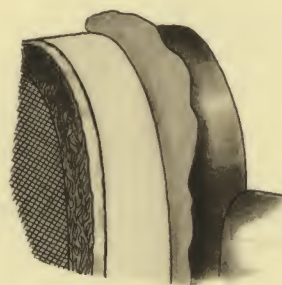

SPRINGS. The springs we use are double coned, oil tempered and japanned. Our springs are longer and therefore have more coils than cheaper springs

which are available. To keep the springs in an upright position, each spring is tied and knotted eight times along the top circumference. It is because Sikes ties and knots each spring eight times that the springs remain upright and in position for the life of the piece.

FILLING. There are a number of vegetable products which are used as filling for cheap upholstered furniture. Sikes used only pure, curled, sterilized hair. The permanent resiliency of hair makes it the most perfect filling for upholstered furniture. This hair filling is closely quilted to the burlap which covers the springs so that it is always evenly distributed.

MUSLIN COVERING. After the hair filling is applied, a muslin cover gives form and trim appearance to the piece.

Without a muslin undercovering, furniture is cheaper in price but soon becomes lumpy in appearance.

COVER. All leather used for Sikes lounge furniture is cut from full size steerhides. In order to use only that portion of the hide which is unmarked

by brands or barbed wire, Sikes discards over a quarter of every hide. This small detail is one of the many niceties which gives Sikes furniture the character and quality which it possesses.

WORKMANSHIP. The skill of Sikes upholsterers is equal to the quality of materials employed in making Sikes furniture. The years of experience which our men have had plus constant supervision result in the finest upholstered furniture to be found in this country.

YOU BUY WITH CONFIDENCE

SEE PAGES 2 AND 3 FOR A DESCRIPTION OF SIKES UPHOLSTERY METHODS

**IT'S SMART TO CONSIDER
YOUR CUSTOMER'S
COMFORT**

WHY not seat your guests as comfortably in your office as in your home? With these luxurious lounge chairs you extend them a truly cordial welcome. The deep spring seats and pillow backs are restful in the extreme. In design this group is strong and masculine—a fitting addition to any man's office. And whether you choose genuine leather or fabric you can be sure of lifetime service. The high standards of Sikes craftsmen assure you of that.

LOUNGE CHAIRS

THAT BUILD CUSTOMER GOOD WILL

A BIG order to be closed—a tough customer to be placated—and the comfort of a friendly lounge chair may contribute to your success. Let an easy chair and davenport give your office that air of hospitality that customers unconsciously appreciate. This group with its loungy cushions strikes just the right note for the executive office. The tailoring is superb, and every detail from the hand tied springs to the genuine leather cover bespeaks the master craftsman.

"AND THEY'RE JUST AS COMFORTABLE AS THEY LOOK"

THOUGH somewhat lighter than most lounge groups this one has splendid comfort qualities and original lines. Noteworthy too is its reasonable cost. The semi-lounge chair is especially attractive by reason of its high back moulded to fit you and to provide a soft head-rest. This chair will serve admirably for the Director's room or for an extra chair in the Private Office.

TO PUT YOUR CALLER AT HIS EASE

WEIGHTY problems are best discussed when businessmen are at ease. A lounge group in a corner of the executive office will serve this purpose well. In these groups, spring cushions resting on spring foundations, are soft enough for comfort, yet stiff enough to hold their shape after years of service. The backs are spring filled and high enough to provide a headrest.

Cushions can be filled with down at an extra charge.

FIRST impressions are often lasting. Let the reception room make that first impression a favorable one. These lounge groups literally welcome your guests. Spring cushions on spring foundations provide restful sitting comfort. Backs are filled with soft pillow springs. The resilient spring edge at the front of seats avoids annoying pressure on the underside of one's legs.

These groups may be upholstered in leather or in fabric. Down-filled cushions are supplied at an extra charge.

FOR A MOMENT'S RELAXATION IN A BUSY DAY

A MOMENT'S relaxation, a quiet talk with associates—these are only two of the many purposes these lounge groups serve in the modern office. Their designs are masculine and their construction rugged. The soft leather cover is well-nigh indestructible. The skilled tailoring is evidenced in the crisp, clean lines of the arms, foundations, and backs. Down-filled cushions are supplied at an extra charge. Also, fabric covers may be used in place of leather, if you prefer.

Genuine Walnut and Mahogany

If you insist on solid comfort, these are the chairs for you. The numbers 1547D and 1548D have loose down-filled cushions on spring foundations. The lower portion of the backs has soft pillow springs. The size of the chairs is ample, and the design impressive. The number 1542, with spring seat, is recommended to those who prefer lighter guest chairs.

Note the heavy leather welt around the seat frame of the swivel chair. It projects out beyond the upholstery nails to prevent their damaging the desk.

1542

1798SE

Same chair with Attached Down Cushion seat is 1798AD.

WHEN years of hard work are crowned with success, take part of your reward in the luxury of these splendid chairs. Their comfort exceeds anything you have ever known. Seats are built up on soft cushion springs. The usual hard edges are replaced by resilient springs that yield easily with your weight. The circular backs are inviting and restful. The tailoring is a triumph of the upholsterer's art. These chairs are the aristocrats of fine office seating.

1806D

CHARACTER breathes in every line of these luxurious chairs. Their strong masculine form marks them for the office of the Chief Executive. No greater comfort can be provided than that of soft down-filled cushions on spring foundations. The broad arms give restful support. Sitting in one of these chairs, you can give full attention to matters at hand without the distraction and irritation that comes from sitting uncomfortably. The broad welt around the seat frame of the swivel chair protects the desk from marring and scratching.

Height from Seat..... 22 1/4"
Sitting Depth 21"
Width between Arm..... 20"

Genuine Walnut and
Mahogany

THESE chairs have almost the loungy comfort of down cushion chairs, the smart appearance of fine executive chairs, all combined with amazingly low cost. The deep spring seats support you without physical strain. Soft spring edges around the seat yield easily with your weight. To give equal comfort to the back, the lower portion has a series of pillow springs that shape themselves to you.

The usual destruction of desk corners by upholstery nails is avoided by omitting them around the seat frame of the swivel chair and setting them back from the leather on the arms.

1801SE

1850

A pleasant occasional chair for use where a lighter chair is desired.

HAD a man-about-town of Eighteenth Century London seen these chairs he would undoubtedly have told you they were fresh from the shop of Thomas Chippendale. Their exquisitely carved legs, broad roll arms, and curved backs stamp them with the genius of that greatest of all furniture designers. Their comfort, however, would have made the master himself marvel. The deep spring seats have soft edges that yield with your weight. The lower section of the backs has pillow springs to give you easy support. Broad welting around the seat of the swivel chair prevents damage to the desk. Every detail is faithful to the tradition of that great craftsman.

SIKES RE-CREATES THE FAMOUS SIGNERS' CHAIRS USED IN INDEPENDENCE HALL BY THE SIGNERS OF THE DECLARATION OF INDEPENDENCE

Height from Seat..... 21"
Sitting Depth 19"
Width between Arms..... 19 3/4"

Genuine Walnut and Mahogany

THE charm of Early American furniture was never better expressed than in the chairs made for the signers of the Declaration of Independence. Sikes brings you a present day interpretation of those famous chairs. We have recaptured the simple beauty of proportion and line that the early cabinetmakers understood so well. The mouldings of the front legs and arm supports are fashioned by hand—they are too fine to be executed by machine.

The signers' chairs will add charm and livability to your office. And they will serve to remind you too, of a dramatic turning point in American history.

An interesting fact is that each man was measured for his chair. The chairs varied in the height of the seat and the sitting depth, depending on the stature of the original user.

1851S

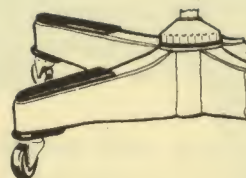

1785SE

1786SE

COMFORTABLE CHAIRS OF DECISIVE LINES

COMFORTABLE chairs go far toward relieving the tedium of office hours. These chairs have deep spring seats with yielding spring edges. Backs are broadly curved. The design is conservative, permitting their use in almost any office. Note the leather welt around the bottom of the seat frame. It saves the desk from scratching and marring.

1829

A NEW discovery in upholstery gives these chairs amazing comfort. Formerly a part of the resiliency of springs and filling was lost because of stretching the leather cover tightly to remove the wrinkles. In these chairs however, the leather is applied without stretching, giving the materials within their full natural resiliency. The seat cushion is attached to a broad spring foundation. The soft back is filled with pillow springs. Once you have tried these chairs you will agree that they are the ultimate in seating comfort.

ATTRACTIVE CHAIRS OF GENIAL COMFORT

This chair with tight spring seat such as illustrated on the arm leg chair is 1825S.

WHILE these chairs are moderately priced, they have all the extra values that you may confidently look for in Sikes products. The broad arms, hand shaped; the generous underframing, and the crisp tailored lines of the upholstery are proof of splendid quality that you will be quick to appreciate. The swivel chair has an especially deep spring seat with yielding spring edge. This same construction can also be supplied in the arm leg chair. Or if you prefer the tight spring seat, such as shown on the arm leg chair, it can be supplied also on the arm swivel chair.

This chair with spring edge seat as illustrated on the swivel chair, is pattern 1826SE.

THE NEW MODERN

DOES IT BELONG IN TODAY'S BUSINESS OFFICES?

Many men have questioned the appropriateness of modern furniture for today's business offices. It is a reasonable question, for much of early modern design was bizarre, impractical and far better suited to the boudoir than the office. But out of the welter of early experimentation and trial and error has come a modern style of solid worth—one that you can buy with assurance.

What are the hall marks of this new modern style? First and foremost it is practical. In creating it, the designer considers first the prime function each piece must serve and fashions it to perform that function ably and well. Next, for its beauty it depends on simple form and proportion with emphasis on beauty of the materials used. That is why walnut, with its beautiful grain, is eminently suited to the new modern.

Finally, it has an air of livability about it. The new modern is essentially honest, sturdy and pleasant. As such it has a quality of timelessness that is a criterion of all fine furniture of every age.

Modern has emerged from its awkward age and growing pains to evolve a worthy new style, full of grace. You can buy the new modern with confidence, knowing that time and use will approve your choice.

THE NEW MODERN IN LOUNGE FURNITURE

HERE is sound modern—simple, rugged, and thoroughly comfortable. You need only sit in the chairs or davenport to appreciate that. And you need no expert to tell you that they are custom-built by skilled artisans. Furthermore, years of use will make you marvel at their sturdiness. Lasting value is built into each one of them.

6134

THESE pieces are typical of the new spirit in Modern. They are substantial and conservative without the freakish extremes of the pseudo-modern. And as with all Sikes seating, the emphasis is on comfort. We recommend that you have at least one of the pieces in a combination of colors; either contrasting or two shades of the same color. We will gladly suggest several attractive combinations.

SEE PAGES 64 AND 65.

HERE is a sturdy pleasant style—one that will grow on you as you use it. The arms are broad and comfortable. Seat and back are of ample size. Notice how the stretchers parallel the line of the seat and that the plainness of the back is relieved by two short welts. They are fine points of design that buyers have learned to expect in Sikes chairs.

SIKES modern chairs belong in the general office too. The trim functional design of this group makes them the logical choice for use with the new styles of general office desks. Their comfortable sitting qualities and lifetime construction likewise recommend them. Notice that the seats have the new saddle shape that eliminates that unpleasant "nose" at the front. Instead, the seat has a broad roll edge that adds immeasurably to its comfort. The following page illustrates this style of chair with a choice of removable cushions.

PERHAPS you are one of those who prefer chairs without upholstery during the summer months, but enjoy the extra comfort of cushions in other seasons. If you are, the dual nature of these chairs will appeal to you. The cushions are easily removed in the summertime, giving you the cool sitting comfort of chairs just as they are illustrated on page 32. When fall comes on, you can put on the cushions again for extra comfort.

A NEW construction at last solves the problem of how to make cushion seats soft and comfortable. In the cushion seat chairs on this page, as well as the chair on the preceding page, the cushions rest on a full spring foundation. The cushions themselves have interiors of curled hair impregnated in Latex. Since both the cushion and the foundation are resilient, their combination achieves unprecedented comfort for cushion seat chairs.

CHARACTER AND DISTINCTION IN TURNED "BANK OF ENGLAND" CHAIRS

If you are looking for all-wood chairs of personality and distinction, let these be your choice. You need not sacrifice comfort to have them. The backs of these chairs have the new compound posture curve and correct pitch to fit you over their whole area. Seats have a new contour that yields greater sitting comfort than was formerly secured in the heavier, more deeply saddled seats. The "nose" at the front of conventional seats has been eliminated to secure an even, gradual shape, both restful and attractive.

INEXPENSIVE CHAIRS OF POPULAR APPEAL

THESE inexpensive chairs have the new comfort features, including the posture curved back and the new seat contour. While they are orthodox in general design, their many refinements set them apart from the more usual chairs of this type. Turnings are simple and substantial. The broad arms are restful. All corners and edges are rounded. Their construction insures years of satisfactory service.

NOW CUSHION SEATS ARE COMFORTABLE

LOOSE cushion seats need no longer be hard and stiff. A new Sikes construction makes them as comfortable as they appear. In this chair, and in the 76C chair of the preceding page, the cushions rest on a spring foundation. The cushions themselves have interiors of curled hair impregnated with Latex. Since both the cushions and their foundation are resilient, the seat yields easily with your weight to give you restful support.

KOOLCUSHION SEATING

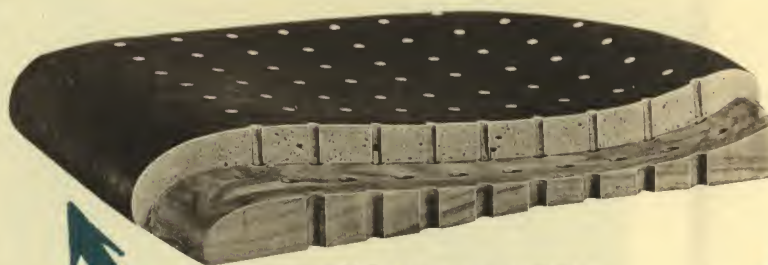

WITH POSITIVE VENTILATION
IS THE SENSATION OF THE YEAR

75Y

See page 41 for sizes,
woods and finishes.

THIS
REVOLUTIONARY DEVELOPMENT
IN SEATING COMFORT

IS EXCLUSIVE WITH
SIKES

The "Hot Seat," literally speaking, is now a thing of the past, thanks to Sikes' exclusive development, Koolcushion Seating.

Now you can have chairs with resilient cushions built into the seat with positive ventilation and with chair arms and back properly shaped for full support. Koolcushion is the ONE chair that is cool and comfortable at all times—in ALL Seasons.

If you've tried making a wooden seat soft by adding a separate cushion you've found the seat hot, even in winter. It's airlocked, because the solid wooden seat permits no air to pass through and the cushion also retains heat. Then too, the added cushion raises you in the chair, destroying the effect which the form-fitting back is supposed to give.

Koolcushion seating has the cushion built down into the seat. Now you can have the comfort of a cushion, shaped to the natural curve of your body, plus the complete natural support of the chair back and arms that the maker intended you to have. And that cushion is cool! It is perforated generously, and those perforations extend all the way through the seat. Further, the cushion unit is the new porous Latex, used in all the new streamline trains and in all new Pullman cars. It is completely aerated so that the heat of your body is

not stored up in the cushion, but instead passes off quickly.

Remember, Koolcushion chairs do not have merely flat cushion seats. Instead those cushions are formed to the natural curves of your body. That means even weight distribution and all day working comfort.

Notice how the forward portions of Koolcushion seats are rolled over the edges. There are no sharp corners or edges at the front to build up annoying pressure underneath your knees. Koolcushion gives you cool, effortless support without annoying pressure anywhere.

Koolcushions will outwear any separate cushions you can buy. That is because they have the finest material and they rest on a firm wood foundation.

Note how ventilation goes through-and-through in this front view of Sikes new, exclusive Koolcushion.

There is no flimsy cane to dry out and break through.

Remarkable too, is the moderate cost of Koolcushion seating. It will cost you no more than an ordinary chair with the loose, unsatisfactory cushion you would have to buy for it.

Don't buy an extra cushion, buy Koolcushion!

76

A CONSPICUOUS ACHIEVEMENT IN "BANK OF ENGLAND" CHAIRS

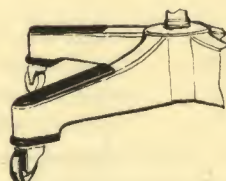

SIKES scores again in bringing the Bank of England style to the peak of its development. As trim and efficient as today's motor cars, these chairs have a degree of sitting comfort that excels anything you have ever known in the commercial styles. Nor was strength sacrificed to achieve this result. These chairs have the same full dowel construction with double dowels at each primary joint, that is your guarantee of lifetime wear in all Sikes furniture.

You will be quick to appreciate the protection of rubber bumper strips around the seats of the swivel chairs. Together with the broad rounding of corners and edges, they offer you extra years of usefulness, both for the chairs and the furniture with which they are used.

IF YOU require only that chairs be comfortable and durable, this group may well be your choice. They are as strong as chairs can be built and have the same superlative comfort that distinguishes all Sikes patterns. Their lower price results from the omission of certain refinements of design, such as streamlining, and the use of cheaper casters on swivel chairs. To protect both chair and desk from damage, the swivel chairs have a continuous rubber bumper strip around the seat. All leg chairs have rubber cushion glides to permit easy quiet movement over the floor.

FOR COOL ALL-DAY COMFORT BUY KOOLCUSHION SEATING WITH POSITIVE VENTILATION . . .

You need only glance at the two views of the Sikes Koolcushion to see why it is the coolest, most comfortable seat available today. Whereas solid seats with an added cushion are hot because they store up accumulated heat,

Koolcushion is cool because the perforations permit the heat to pass off quickly. Not only is the sturdy wood base perforated, but the aerated, porous Latex form-fitting cushion is likewise perforated. These through-and-through perforations are the "cooling system" of the Sikes Koolcushion seat.

2501Y

KOOLCUSHION SEATING IS BUILT IN FOR LIFETIME COMFORT

Besides being cool, the Sikes Koolcushion insures permanent comfort. When a separate, added cushion is used it raises you up and the comfort of the back and arms is destroyed. Since Koolcushion is built-in you are not lifted up out of the seat. With built-in Koolcushion seating, you get the support which the seat, back and arms are designed to give. Koolcushion seating is permanent and lasting because of its solid, durable construction as contrasted with the impermanence and fragility of cane.

WHILE these chairs are sufficiently orthodox in appearance to permit their use with older styles, their clean functional design and unprecedented comfort set them far above the ordinary commercial chairs. The flush surfaces of seat, boxing and front legs; the new saddle shape of seats; and the posture back are improvements new to chairs of this grade.

Full dowel construction and corner blocking give them the strength and long life that you look for in all Sikes products. Extra years of service are assured by the rubber bumpers around the seats of the swivel chairs, protecting both chair and desk against damage.

2501

This chair with perforated leather seat over cane is 2501 P.

INEXPENSIVE CHAIRS THAT LEAD IN STYLE AND COMFORT

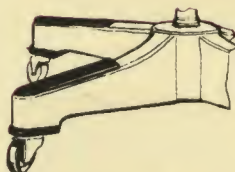

WHILE these are low priced chairs, they embody the same fundamental features of strength and comfort that have distinguished Sikes chairs for years. Seats have the new roll edge replacing the uncomfortable "nose" at the front. Backs have the same posture curve as the higher grade chairs. The new seat pitch and back pitch offer maximum comfort.

ONLY THE SIKES REST-FLO CHAIR IS CONDITIONED FOR

1. You will have full, comfortable support whether you are sitting up, working at your desk or sitting back to relax.

2. The porous Latex seat, back and arm rests allow even weight distribution, giving you the greatest possible comfort regardless of posture.

3. Patented exclusive "Fixed-Floating Seat" insures comfort in any sitting position. (For complete description, turn to page 50.)

4. Adjustment of seat height, back height, pitch of back and spring tension can be regulated to fit the chair to you as completely as though it were custom-built for you. (For complete description, turn to page 50.)

WITH "FIXED-FLOATING SEAT"

(U. S. PATENT NO. 1, 909, 018)

YOUR ALL-DAY COMFORT

Remarkable as it seems, you can finish a hard day's work as fresh as when you started—in a Sikes Rest-Flo Chair with "Fixed-Floating Seat." The revolutionary Sikes Rest-Flo Chair promises you a new conception of resilient comfort that positively contributes to tireless, efficient administration of your daily duties. The Sikes Rest-Flo Chair gives you all-day comfort by giving you support, not only when you are sitting back in a relaxed position but also when you are sitting up straight, working at your desk.

This conditioned-for-comfort chair has a seat, back and arm rests of porous, moulded Latex . . . an epochal advance in executive chairs.

Cut-away view of seat specially moulded of porous Latex. Note the aerated, cellular construction that adds so greatly to comfort and prevents heat accumulation.

The aerated, cellular formation of this extraordinary material allows the chair to mould itself to the contours of the body. Regardless of weight, you cannot touch bottom. There is no sagging; no misplacement. The occupant shapes the chair immediately to his most restful working position.

Moreover, the porous construction of seat, back and arm rests gives completely air-cooled comfort. The aerated Latex prevents heat accumulation. And there are no stiff, hard edges to press on nerves and blood vessels.

In this remarkable Sikes Rest-Flo Chair you experience a new satisfaction—the capacity to work steadily at "full speed ahead" without fatigue or strain. You actually do your last hour's work with the same effortless ease that you did the first hour. For complete explanation of the "Fixed-Floating Seat" and "To-your-measure" adjustments, turn to page 50.

HOW THE "FIXED-FLOATING" SEAT OF THE SIKES POSTURE CHAIR

(U. S. PATENT No. 1,909,018)

GUARANTEES ALL-DAY COMFORT

THE "FIXED-FLOATING" WAY

Completely comfortable support with form-fitting seat and back, avoiding pressure at any point.

WORKING POSITION

Reasonably adequate support . . . but often a hard seat edge impedes circulation and irritates nerves.

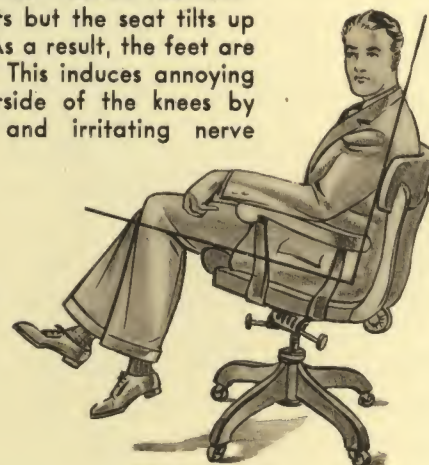

RELAXED POSITION

The same satisfying comfort as above. When the back tilts, the seat tilts also, preserving the correct angle. When you lean back, the front of the seat does not rise perceptibly, thus allowing your feet to remain on the floor. This exclusive tilting action, which keeps the front of the seat down, places no irritating pressure beneath the limbs where arteries and nerves are near the surface.

Extreme discomfort in this "layback" position. Though the back tilts, the seat remains rigid (parallel to the floor). The angle of the body is completely changed and you assume a half lying-down position, placing an immediate strain on back and neck, and shoving you out of the chair.

Extreme discomfort in this "feet-off-the-floor" position. The back tilts but the seat tilts up in the same degree. As a result, the feet are hoisted off the floor. This induces annoying pressure on the underside of the knees by impeding circulation and irritating nerve centers.

WHATEVER YOUR HEIGHT • • SIKES EXECUTIVE POSTURE CHAIRS ARE ADJUSTABLE TO YOUR COMFORT • • BY HAND

All Sikes Posture Chairs are completely adjustable by simple hand controls that give true custom-built ease. No tools are required; no complicated mechanism. You can turn a wheel and raise or lower the back. A second wheel raises and lowers the seat; another adjusts the pitch or angle of the back rest . . . and a fourth wheel regulates the spring tension of back and seat. Thus, the Sikes Executive Posture Chair is, in effect, custom-

built to your individual size and comfort just as completely as though it were built especially for you.

Sikes Posture Chairs afford complete comfort because of these thoughtfully planned, easily handled controls.

On the pages which follow, will be seen many Executive and Clerical Posture Chairs with the "Fixed-Floating Seat." They may be recognized by the suffix "-3" following the pattern number.

TO INDUCE HEALTHFUL SITTING POSTURE COMFORTABLE CHAIRS WITH THE FIXED-FLOATING SEAT

(U. S. PATENT No. 1,909,018)

X73SE-3

WHY KOOLCUSHION SEATING IS LASTING

The section of a Sikes Koolcushion illustrated above shows graphically why it is the most lasting, cool and comfortable seat you can buy. Over a thick, saddled, perforated hardwood base is applied an equally thick

porous Latex aerated cushion. Accelerated laboratory tests give Latex a life of over fifteen years. Then to the Latex cushion is bonded genuine leather.

KOOLCUSHION SEATING COSTS NO MORE THAN A CHAIR AND AN EXTRA PAD

Compare the cost of an ordinary chair with a Sikes Koolcushion chair. You will be amazed that with its cooler, more comfortable features, Koolcushion costs no more than the ordinary chair with its discomfort-producing pad.

Consider these comfort-making principles: Koolcushion is cool because of the positive ventilation afforded by the perforated wooden base, the perforated and aerated Latex cushion and the perforated leather covering.

Koolcushion is comfortable because the Latex cushion is form-fitting and resilient. It is built down into the seat, enabling the back and arm rests to give the support intended. When you are raised up, as with an added cushion, both back and arm rests are out of line and uncomfortable.

Height from Seat..... 16½" to 18½"
Sitting Depth 18½"
Width between Arms.... 18½"

Quartered Oak, Imitation Mahogany, Imitation Walnut, and Genuine Mahogany and Walnut.

nut and Genuine Mahogany
and Walnut.

X85 1/2 YL-3

The positive ventilation afforded by the perforations is only one reason for the comfort of Koolcushion seating: A major reason for the superiority of Koolcushion seating over an extra added pad is the fact that Koolcushion seating is **BUILT DOWN INTO THE SEAT**. Furthermore, the soft rolled edge at the front prevents uncomfortable pressure on the underside of the knees.

Because it is an integral part of the chair, Koolcushion seating places the body in proper relation to the back and arms enabling you to obtain the restful support intended.

WHAT HAPPENS WHEN AN EXTRA CUSHION IS ADDED TO ANY ORDINARY CHAIR?

Look at the sketch at the left, obviously exaggerated to make the difference apparent. You sit so high that your feet are often raised off the floor.

This causes the hard seat edge to press against the underside of the knees, impeding circulation and causing discomfort. Then, too, because you are raised the arms are too low for comfort and the form-fitting back no longer fits.

If to this built-down-in comfort you add the coolness which the positive ventilation of Koolcushion seating affords, you have the coolest, most comfortable and most durable chair you can buy.

MORE PRODUCTION HOURS PER DAY WITH THE SIKES AIR-FORM POSTURE CHAIR WITH "FIXED-FLOATING SEAT"

(U. S. PATENT No. 1,909,018)

THE AIRFORM SEAT. These clerical posture chairs are equipped with a resilient, porous, moulded Latex cushion seat, which, because of the extraordinary comfort it affords, permits the occupant to work "full speed ahead" without strain or fatigue. The aerated cellular cushion (see close-up below) moulds itself automatically to the contour of the body. Regardless of weight you cannot touch bottom; there is no sagging or displacement.

And because of its porous, cellular construction, the seat gives air-cooled comfort. Notice particularly that there are no stiff, hard edges to compress the nerves and blood vessels, a condition which lowers clerical efficiency.

Continuous working comfort, no "four-o'clock letdown," more productive hours per day, a happier, healthier office force—these are the concrete, dollars-and-cents advantages you achieve by installing the Sikes Air-Form Posture Chair.

X79 1/2-3

Height from Seat..... 13" to 15"
Sitting Depth 13 3/4"
Width of Seat..... 15"
Quartered Oak, Imitation Mahogany, Imitation Walnut

HOW THE "FIXED-FLOATING SEAT" OF THE SIKES POSTURE CHAIR (U. S. PATENT No. 1,909,018) GUARANTEES ALL-DAY COMFORT

THE WRONG WAY

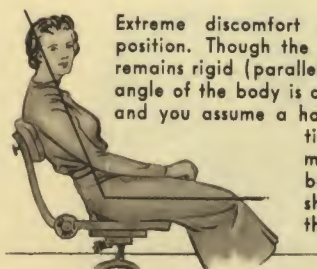

Reasonably adequate support . . . but often a hard seat edge impedes circulation and irritates nerves.

WORKING POSITION

THE "FIXED-FLOATING WAY"

Completely comfortable support with form-fitting seat and back, avoiding pressure at any point.

Extreme discomfort in this "layback" position. Though the back tilts, the seat remains rigid (parallel to the floor). The angle of the body is completely changed and you assume a half lying-down position, placing an immediate strain on back and neck and shoving you out of the chair.

RELAXED POSITION

The same satisfying comfort! When the back tilts, the seat tilts also, preserving the correct angle. When the back tilts, the front of the seat does not rise perceptibly. This exclusive tilting action, therefore, places no pressure beneath the limbs where arteries and nerves are near the surface.

REGARDLESS OF HEIGHT, SIKES POSTURE CHAIRS ARE ADJUSTABLE - BY HAND - TO THE SITTER'S COMFORT

All Sikes Posture Chairs are completely adjustable by simple hand controls that give true custom-built ease. No tools are required; no complicated mechanism. While seated in the chair, you can turn a wheel and raise or lower the back. A second wheel raises and lowers the seat; another adjusts

the pitch or angle of the back rest . . . and a fourth wheel regulates the spring tension of back and seat. Thus Sikes Posture Chairs are as comfortable as if custom-built to the user's individual size.

CHAIRS WITH TILTING BACKRESTS

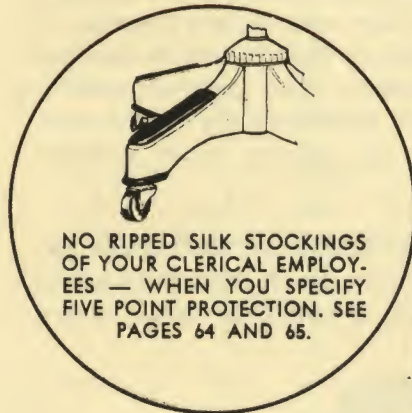

X85 $\frac{1}{2}$ VL-3

The seat is moulded in leather over plywood to give you much of the resiliency of a spring upholstered seat.
(Patent No. 1938879)

THE X85 $\frac{1}{2}$ -3 and related chairs are made in quartered oak, imitation mahogany, imitation walnut, and genuine mahogany and walnut. The X67 $\frac{1}{2}$ FL-3 is made in quartered oak, imitation mahogany, and imitation walnut. The X87 $\frac{1}{2}$ SL-3 is made in genuine mahogany and genuine walnut.

With the exception of X87 $\frac{1}{2}$ SL-3 these chairs have tilting backrests that support you comfortably in ANY SITTING POSITION.

NO RIPPED SILK STOCKINGS OF YOUR CLERICAL EMPLOYEES — WHEN YOU SPECIFY FIVE POINT PROTECTION. SEE PAGES 64 AND 65.

1. BALL BEARING CASTERS
(2 inch wheels)

THE COST OF THE OPTIONAL EQUIPMENT IS LESS
THAN THE COST OF RESTORING ONE PIECE OF
DAMAGED OFFICE FURNITURE

5-POINT PROTECTION

SWIVEL CHAIRS

The 5-Point Protection which Sikes gives to your office furniture serves a two-fold purpose. It keeps your furniture looking like new, even after years of service, and eliminates the use-worn appearance which is apparent in so much office furniture. Secondly, it saves you money in a very practical way. By insulating both chair and desk against damage, the costs of repairs and refinishing are effectively reduced. You save money because the optional equipment costs less than the refinishing of even one piece of office furniture.

★ BALL BEARING CASTERS with Two Inch Wheels

PROTECT FLOORS AGAINST MARS AND SCRATCHES

No longer must costly linoleum, tile or other floors be damaged beyond repair. These large Bakelite casters with ball-bearing swivels and graphite impregnated axle bearings glide noiselessly, without effort and without wear to floors. They are anchored permanently in the base; therefore, they never fall out and they have extraordinary long-wearing qualities. Because of their silent, frictionless action, annoying squeaks and squeals are entirely eliminated.

STANDARD EQUIPMENT ON ALL SIKES SWIVEL CHAIRS

★ BASE SNUBBERS

Protect desk legs from splintering

And here is complete protection where the chair base bumps the inner desk leg—keeping base and desk legs like new and saving repairs. This rubber snubber, an exclusive Sikes feature, is securely made a part of the chair base.

OPTIONAL EQUIPMENT ON ALL SIKES SWIVEL CHAIRS AT A NOMINAL EXTRA CHARGE

★ 3

BAKELITE SCUFF PLATES

Protect chair base from scratching and scuffing

The base of a Sikes Swivel Chair cannot scuff up, splinter or damage shoes and hosiery! It remains as smooth and attractive as when new, saving repairs and refinishing because the Bakelite Scuff Plates successfully resist the roughest treatment. They harmonize in color with the wood and are permanently anchored to the base. Bakelite is superior to metal which tarnishes and roughens under use. The burrs so created are even more destructive than splintered wood. Bakelite is superior to rubber because rubber absorbs grime and redeposits it on light shoes. The smudge which your eraser often makes shows the effect of a rubber scuff plate on shoes.

OPTIONAL EQUIPMENT ON ALL SIKES SWIVEL CHAIRS AT NOMINAL EXTRA CHARGE.

★ 4

SEAT BUMPERS

Protect both chair seat and upper desk legs from damage

Perfect protection where the chair seat bumps the desk! It's rubber against wood—no splinters, no gouges, no damage of any kind to chair seat or desk. The special wear-resisting bumper extends around the front and sides of the seat and will give trouble-free service for the life of the chair.

STANDARD EQUIPMENT ON ALL SIKES WOOD SEAT SWIVEL CHAIRS

★ 5

ARM GUARDS

Protect both chair arm and center desk drawer from wood-splintering collision

Sikes arm guards overcome one of the most common causes of desk and chair destruction—the scraping and scratching of chair arms against the center drawer of the desk. This projecting rubber arm guard eliminates all wear and preserves the original smooth appearance of desk and chair at these points. Anchored by nails and cemented . . . and built-in to stay! Exclusive with Sikes.

OPTIONAL EQUIPMENT ON ALL SIKES SWIVEL CHAIRS, (WHERE APPLICATION IS PRACTICAL) AT A NOMINAL EXTRA CHARGE.

NO SQUEAKS . . .

NO OILING . . .

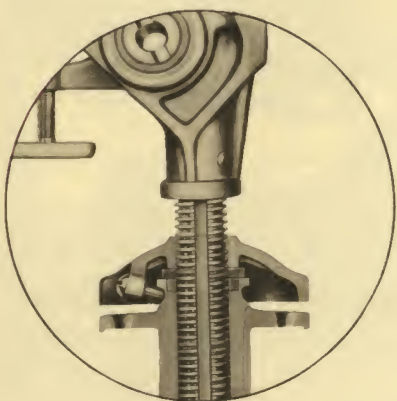

NO DANGER OF INJURY FROM BREAKING SPRINGS

THE TILTING ACTION

Quiet, Safe Operation — Perfect Balance

All the tilting action is controlled by the twisting of a rubber cylinder pressed between two steel cylinders under 40,000 pounds pressure. The rubber is completely protected against deterioration and should last for the life of the chair. All the tilting is in the rubber. There is no hinge action of metal-to-metal, hence no chance for squeaks to develop, and no need for oiling.

THE SWIVEL ACTION

Self-lubricating — Squeak-proof

The chair swivels on a large lubricated bearing set into the hub. This bearing is of porous bronze, impregnated to 30% with oil and 3% with graphite. It assures permanent lubrication for the swivel. No squeals or squeaks—no oil to drop down on the floor to ruin carpets.

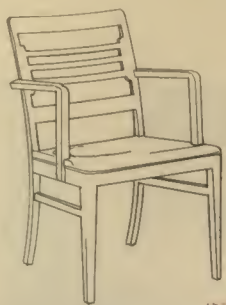

THE SIKES FLO-TILT MECHANISM

ADJUSTABLE FOR HEIGHT AND TILTING TENSION

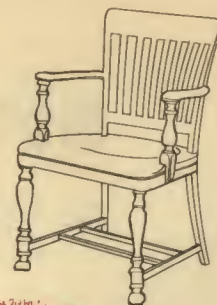

You probably hear it in your office—you do in most—that whining, caterwauling of squeaky chair springs. You may stop it for a time with oil, only to have it break out again somewhere else. Annoying, isn't it? And unnecessary too, for the Sikes Flo-tilt Mechanism does away with springs. All the tilting action is in rubber (see above, left), and all other moving parts are permanently lubricated (see below, left). It gives you quiet silent action throughout the life of the chair.

It gives you a new feeling of safety also. For when you tilt back in a Flo-tilt equipped chair, there is no chance of a spring breaking and toppling you over backwards. The rubber tilting device is sure and safe under all conditions. You'll enjoy the quiet, safe action of the Flo-tilt mechanism.

**WHETHER YOU GO
MODERN**

**OR REMAIN
TRADITIONAL**

**THE EIGHT JOINTS AROUND THE SEAT FRAME
ARE THE KEYSTONES OF CHAIR STRENGTH.
BE SURE THEY ARE FULLY DOWELLED.**

When you buy chairs, you naturally hope that they have rigid, tight fitting joints, that will hold under all conditions of use. You can be sure of it when you buy Sikes chairs, for they are built with full dowel construction. That is your prime guarantee of lifetime service. To quote a Government report, "*The dowel joint is employed for most of the finest furniture made today.*"* It is the only construction that has stood the test of time. Cheaper constructions are used by some manufacturers even today. The results are open, squeaky joints that make a chair dangerously unfit for use. Play safe! Insist on full dowel construction for permanent, tight fitting joints that assure lasting satisfaction.

* U. S. Department of Commerce Booklet: "Furniture, Its Selection and Use."

INSIST ON FULL DOWEL CONSTRUCTION

FULL DOWEL CONSTRUCTION

means that pre-conditioned hardwood dowels are glued in at every important joint. Wherever possible two dowels are employed. The eight joints around the chair frame beneath the seat are the keystones of strength. Insist on chairs that have these frames joined by dowels to the legs at every point. Their use assures sound joints that are everlasting.

PLAY SAFE! DEMAND FULL DOWEL CONSTRUCTION

. . . TO STEEL DESK USERS
SPECIFY SIKES DUROGREEN
AN OPAQUE CHIP-PROOF FINISH TO MATCH ANY COLOR YOU SELECT
FOR YOUR CHAIRS

The chairs illustrated at the left are fully described on pages 32 and 33.

IF YOU USE STEEL DESKS

If you use steel desks, you naturally want your chairs to match in color with a finish that is hard wearing. Heretofore no wood finish to match steel desks has been entirely satisfactory. You have had to choose between a transparent finish that showed the grain of the wood or a heavy enamel that would quickly chip and show the bare wood beneath.

Now, with Sikes Durogreen, you can match your desk perfectly in an opaque color that is chip-proof and durable. In fact chairs finished in Durogreen look like metal, with none of the drawbacks of coldness, chipped finishes and tarnishing that is typical of some metal chairs.

WHAT IS DUROGREEN?

Durogreen is an opaque lacquer finish that conceals the grain of the wood. It has a special penetrating quality that bites deep into the wood, thus making it chip-proof and wear-resisting. Because it is a close-to-the-wood finish, it does not have the heavy pigment that causes the enamel finish to dry out and chip. Chairs in Durogreen preserve their attractive appearance for years. As the price list indicates, the cost for this finish is very moderate. It can be supplied on any Sikes chair and whether you want to match a green color, gunmetal, or any of the other metal colors, you will find it easily accomplished in Durogreen.

TERMS

Terms are 2% for cash in 30 days; net 60 days. All prices are F.O.B. Buffalo, N. Y.

CANCELLATION

All orders for upholstered chairs or orders for green stain, Durogreen, other special finishes, or special construction, are not subject to cancellation after work has been started.

RETURNED GOODS

No goods may be returned for credit unless arrangements have previously been made. In no case can upholstered furniture or furniture built to special order or with special finish or treatment be returned. On all other returns, 10% of the invoice price will be charged and transportation charges prepaid

SPECIAL CHAIRS AND SPECIAL TREATMENT

We are prepared to design and manufacture special chairs and other special furniture. In writing state purposes for which the furniture is to be used, the general style, and the approximate quantity.

Chairs carried in regular stock can on occasion be given special treatment. Such alterations as paneling front legs, and arm supports, fluting, or special upholstery nail treatment, require an extra charge, the amount of which will be quoted on request.

REGULAR FINISHES

Chairs are regularly supplied in standard finishes to match the stock furniture of the leading commercial wood office furniture manufacturers. A description of these finishes is given below. Certain special finishes, described in this section, are also furnished without extra charge.

OAK

OAK No. 9. A varnish finish of light golden color, sometimes referred to as "office oak." This is the standard color for oak and matches the oak color of leading desk and table manufacturers. This is supplied on all oak pieces unless otherwise specified. There is no extra charge for this finish. Code Word: Pipkin.

OAK No. 5. Weathered Oak: A dark waxed finish, showing the open pores of the wood. There is no extra charge for this finish.

OAK No. 6. Early English Oak: A varnish finish, with the pores of the wood filled; considerably darker than No. 5. There is no extra charge for this finish.

OAK No. 7. Household Oak: A dark brown varnish finish, a few shades darker than the regular light office oak. There is no extra charge for this finish. Code Word: Pitch

OAK No. 12. Fumed Oak: An acid-burn, fumed oak, waxed finish, of medium brown color. There is no extra charge for this finish. Code Word: Pith.

OAK No. 22. School Brown Oak: A varnish finish of medium brown color standardized by the National School Supply Association. There is no extra charge for this finish.

MAHOGANY

MAHOGANY No. 10. A finish of medium red color. This is our standard mahogany color and matches that of the leading desk and table manufacturers. For imitation mahogany we use a varnish finish; for genuine mahogany, a lacquer finish. There is no extra charge for these finishes.

MAHOGANY No. 8. Adam Brown: A blend of deep red and brown, somewhat suggestive of age. A lacquer finish is used for the genuine mahogany, and a varnish for the imitation mahogany. There is no extra charge for these finishes.

WALNUT

WALNUT No. 11-13. A finish of medium brown color. This is our standard walnut color, applying to both walnut and birch chairs, and matches that of the leading desk and table manufacturers. For genuine walnut, a lacquer finish is used; for imitation walnut, a varnish finish is used. There is no extra charge for these finishes.

ANTIQUE MAPLE

Furniture regularly supplied in imitation mahogany and imitation walnut finishes can also be supplied in Antique Maple finish at an extra charge of \$1.50 per chair, list.

FINISHES TO MATCH STEEL FURNITURE

Chairs can be supplied in green and other color finishes to match the regular colors of each of the steel furniture manufacturers. Two types of finishes are supplied:

A. Durogreen Finish. This is an opaque lacquer finish, concealing the grain of the wood and is supplied in various shades of green as well as in other colors. While it has the same appearance as enamel finishes, it is chip-proof and wear resisting (see catalog page 68). Chairs ordered to match metal desks are regularly supplied in this finish. In ordering specify the manufacturer whose product is to be matched and his finish number. Approximately one week is required for this finish.

B. Green Stain Finish. This is an acid burn lacquer finish with permanent stain that penetrates the grain of the wood. It is supplied on oak only. It is transparent, revealing the grain. In ordering specify the manufacturer whose product is to be matched and his finish number. Approximately one week is required for this finish.

SPECIAL FINISHES

An extra charge of \$2.00 per chair, full list, is made for all finishes requiring a special selection of wood, as Silver Grey on Oak, Natural or Light Antique Oak, or Natural Mahogany.

For special colors, other than standard colors of the leading wood desk and table manufacturers, there is an additional charge of \$1.50 per chair, full list. For light finishes that require extreme bleaching of the wood, there are extra charges that will be quoted on request.

SHIPPING WEIGHTS AND PACKING METHODS

The last column of the price list indicates the approximate shipping weight for each piece. Unless otherwise indicated this includes the weight of cartons. Where the weight is followed by the figure 2, the weight is that of two chairs.

Patterns whose prices are marked with an asterisk (*) are regularly shipped wrapped only. On all but the armless leg chair and the typewriter chairs, the extra charge for crating is \$1.00 per chair, full list. On the armless leg chair and typewriter chairs the extra charge is 50c per chair list provided they are shipped in quantities of two or more at one time.

UPHOLSTERING

Upholstered chairs may be purchased in any one of three grades of upholstery leathers. The lowest priced upholstered chairs can also be purchased in a fourth grade. The four grades are as follows:

GRADE A—Machine Buffed: All leathers marked "Grade A" are machine buffed. Chairs upholstered in this grade take the price shown in the "Grade A" column of the price list. This leather is the first cut from the steerhide after a 1/64" slice has been removed from the grain surface. It is not quite as pliable nor fine as the top grain leathers, but is durable and is suitable for use on the lower priced grades of upholstered chairs.

GRADE B—Corrected Top Grain (Century, Peerless Antique, Imperial Antique): All leathers marked "Grade B" are corrected top grain, in a variety of finishes. Chairs upholstered in this grade take the price shown in the "Grade B" column of the price list. This grade is secured from the top of the hide, after

the removal of occasional surface blemishes. It is soft, warm, and in other respects well suited to the better grades of upholstered chairs.

GRADE C—Full Top Grain (Vealskin Finish, Morocco Grain Finish): All leathers marked "Grade C" are full top grain, in a variety of finishes designated as Vealskin Finish and Morocco Grain Finish. Chairs upholstered in this grade take the price shown in the "Grade C" column of the price list. Full top grain leathers are obtained from the top surface of perfect steerhides, free from any scratches or blemishes of any kind. Leathers of this grade are the finest obtainable, and are recommended for use on the highest grades of upholstered chairs, lounge chairs, and davenports.

GRADE X—Luxor Leather. Leathers of this grade are less pliable or durable than those of Grade A, machine buff. They are a selection of deep buff made from domestic cow hides. They are offered only for the lower price upholstered chairs that are priced in this grade. Chairs not priced in this grade cannot be supplied in it. While we consider Luxor leathers serviceable, *we do not guarantee it against cracking and will not replace it.*

OTHER SPECIAL LEATHERS. BECAUSE OF EXCESSIVE WASTE IN CUTTING, THERE IS AN EXTRA CHARGE FOR ANY LEATHER NOT SHOWN IN THE SIKES SAMPLE BOOK. THIS EXTRA CHARGE IS FIVE PER CENT OF THE VALUE OF THE CHAIR IN THE GRADE SELECTED.

Cushions. Lounge Chairs and Davenports.

All cushions for lounge chairs and davenports are regularly spring filled. Down filled cushions are supplied at an additional list charge of \$12.00 per cushion.

Attached Down Cushions. As indicated in the catalog many of the finer executive chairs have loose down filled cushions on spring foundations. If preferred, the upholstery can be altered to make these down cushions attached to the seat. The No. 1809AD of Catalog Page 61 illustrates this feature. This is designated by the symbol "AD" following the pattern number and is supplied without extra charge over the cost of loose down cushion seats.

Bank of England and General Utility Chair Cushions. Where cushion seats are shown on Bank of England and General Utility chairs the cushion interiors are of curled hair, long drawings, impregnated in pure Latex. Cushions of this construction are more resilient and comfortable than those containing the old style hair pad. These cushions are non-reversible. Prices for reversible cushions will be quoted on application.

Knife Edge Cushions. If desired a cushion of approximately 1¼" thickness with single welt, non-reversible, can be supplied on wood saddle seat chairs. They are available in two sizes and are not fitted around the arm supports.

Small size for armless chairs.....\$6.50 each full list
Large size for arm chairs.....\$7.50 each full list

Leather is machine buff of the customer's selection. If the cushions are desired notched to fit the arm supports, add \$1.00 per cushion full list.

Pad Leather Seats. All revolving chairs with perforated leather seats over cane can be furnished with pad leather seats at no extra charge.

Fabrics. Chairs may be upholstered in two grades of fabrics:

Grade X—Autocord. All chairs upholstered in Autocord fabrics take the prices shown in the "Grade X" column of the price list. Fabrics of this grade are closely woven, and allow one to move about easily in the chair. They are the type used in many of the better motor cars, and are extremely hard wearing. They are available in brown, red, and green.

Grade B—Gros Point. Chairs upholstered in Gros Point fabrics take the prices shown in the "Grade B" column of the price list. These fabrics, made by The L. C. Chase Co., are 100% mohair and will compare favorably with top grain leather in wearing quality. They have a smooth finish and attractive texture. They are available in six colors.

Elimination of Upholstery Nails on Outside Backs. On numerous leather upholstered chairs in the catalog, welts replace upholstery nails. On these patterns the use of upholstery nails is confined to the outside of the back. If nails are to be omitted here also, extra work is involved in sewing the back, the charge for which is \$2.00 per chair, full list.

SIKES FLOTILT CHAIR CONTROL (See Catalog Page 66)

The Sikes Flotilt Chair Control is standard equipment on all except posture chairs. This mechanism is noiseless, never requires lubrication, and eliminates all danger of toppling over backwards due to breaking springs. The tilting action is mounted entirely in rubber that is protected against deterioration. The swivel action is self-lubricating.

POSTURE TYPIST CHAIR MECHANISMS

All posture chairs, Catalog Pages 48 to 58 inclusive, are equipped with Sikes self-lubricating swivel mechanisms. Patterns whose numbers are followed by the symbol "—3" are regularly equipped with the patented Fixed-Floating mechanism described on Catalog Pages 50 and 55. With the exception of patterns on Page 58, all posture chair patterns may be supplied with the Fixed-Floating mechanism at an additional charge of \$1.00 per chair. All posture chairs provide hand adjustments for seat height, back height, back pitch, and back spring tension.

FIVE POINT PROTECTION (See Catalog Pages 64 and 65)

Five Point Protection comprises a series of devices to protect swivel chairs, desks, and floors against damage. It protects both chairs and desks against splintering at their most vulnerable parts. It keeps furniture looking new and practically eliminates the expense of repairs and refinishing. With a few minor exceptions, it can be applied on all Sikes swivel chairs. The five points of protection and their costs are:

- Protection No. 1 Ball Bearing Casters**.....Standard Equipment (No extra charge).
with two inch wheels, to save wear on floors.
- Protection No. 2 Base Snubbers**.....\$1.50 full list per chair.
to protect the chair base and the lower portion of desk legs.
- Protection No. 3 Bakelite Scuff Plates**.....\$1.50 full list per chair.
to protect the top portion of chair bases.
- Protection No. 4 Seat Bumper**.....Standard Equipment (No extra charge).
to protect wood chair seat and the upper portion of desk legs.
- Protection No. 5 Arm Guards**.....\$.50 full list per chair.
to protect the front of chair arms and the center drawer of desks (supplied where application is practical). When Protection Nos. 2 and 3 are ordered on Arm Revolving chairs, and the style of the arm permits, Protection No. 5 will also be included, and no charge will be made for Protection No. 5 in these cases.

CASTERS AND GLIDES

All Sikes revolving chairs are regularly equipped with the Bassick Company's Diamond Arrow ball bearing casters with Atlasite wheel of 2" diameter. The caster number is 9699.

If a soft wheel of 2" diameter is substituted (Bassick No. 9696) add 50c full list per chair.

If revolving chairs are purchased without casters, deduct 50c full list from the list price of the chair.

If casters are purchased separately without chairs the following types are supplied at the following prices:

- Bassick No. 9699 Diamond Arrow, hard wheel 2" diameter.....\$2.00 per set full list.
- Bassick No. 9696 Diamond Arrow, soft wheel 2" diameter..... 2.50 per set full list.
- Darnell Ball Bearing, soft or hard wheel 1 $\frac{3}{4}$ " diameter..... 2.50 per set full list.
- Darnell Ball Bearing, soft or hard wheel 2" diameter..... 3.50 per set full list.

Glides—All Sikes leg chairs are regularly equipped with rubber cushion glides (Bassick No. CG90). When chair glides are ordered separately, the following list prices apply:

- Bassick Rubber Cushion Glide (No. CG90)..... 40c per set full list.
- Bassick No-Mar Glide (No. NR20).....\$1.00 per set full list.

JURY BASES

Any revolving chair in the catalog can be equipped with jury base. They can be made to revolve and tilt, revolve and not tilt, tilt and not revolve, or can be made rigid, neither tilting nor revolving. Catalog Page 60 illustrates two chairs on jury bases.

Jury bases for tilting and revolving are regularly supplied with the Sikes Flotilt mechanism.

Jury bases are furnished at regular list of the corresponding revolving chairs.

BOOKKEEPERS' AND ADDING MACHINE STOOLS

Page 59 of the catalog illustrates bases in three heights for use with stool seats and armless chair seats. Any armless chair seat can be mounted on one of these special bases at \$4.50 list each, added to the price of the armless revolving chair in this list. In ordering, specify the pattern number of base and chair seat.
